

The GenFlex Fully Adhered System is a technique used frequently when a smooth look is desired. It is ideal for new and re-roof installations. After the membrane is positioned over the substrate, both the back of the membrane and the bonding surface of the substrate are coated with GenFlex Bonding Adhesive. The membrane is then carefully rolled back into position and brushed down using a push broom. Seams are adhered using GenFlex Seam Tape or GenFlex G-400 Seam Adhesive. This system installs quickly with a continuous even surface and has no mechanical penetration of the membrane.

The Bar Anchor Tape System

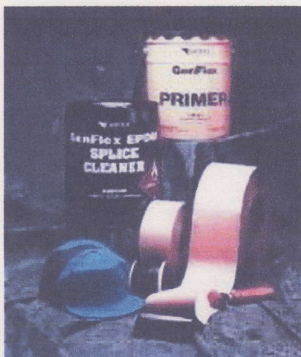

The Fastener at Seam Termination System

The FRM System

To find out more about these other GenFlex Roofing Systems please contact a sales representative at A. H. Bennett Company or visit GenFlex at <http://www.genflex.com/>
